

**Q. Attention is a cognitive function that mediates most information processing that takes place for us. While you have studied the mechanism and processes of attention in some detail, you are requested to reflect on the implications of attentional processes in ecological life settings while people are engaged in their daily jobs.professions etc. Reflect on the benefits of attention and hazards of inattention during such settings for different professions. You will need to analyse and describe the scenario and implications of attention in detail for the selected scenario. For convenience, please select only one scenario for your analyses.**
